

255nm LED performance information

255nm LED performance information

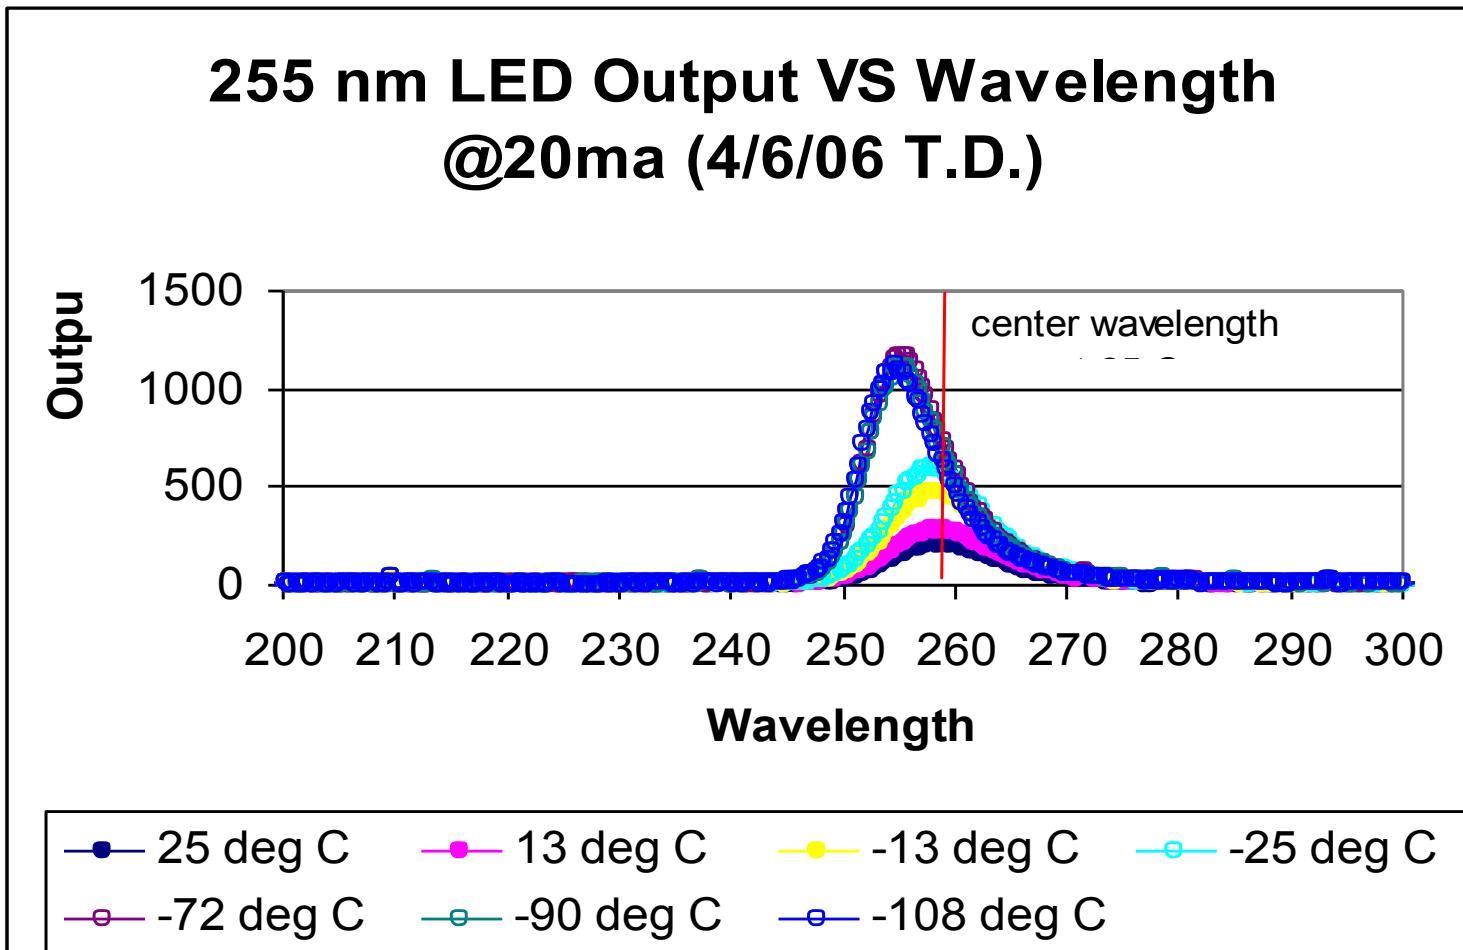

UVLED255 output vs current vs forward bias voltage

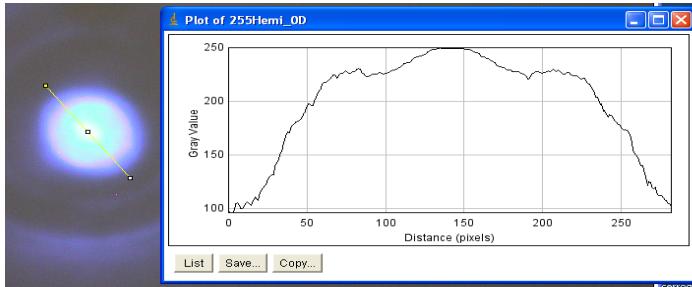

This plot shows the Forward Voltage vs. Input Current.
Also shows output as a function of forward Bias current.
All this data is at Room Temperature operation

UVLED255, Wavelength and output vs Temperature

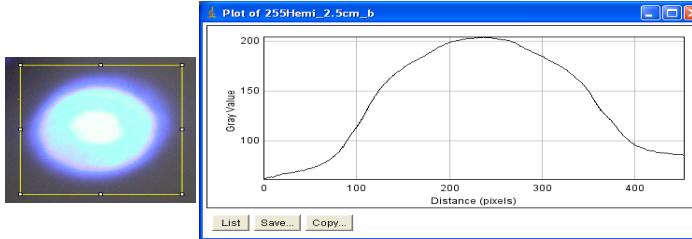

The output improved by 600% when the LED was cooled from room temperature to -108°C . In addition, there was a shift to deeper UV by over 5nm.

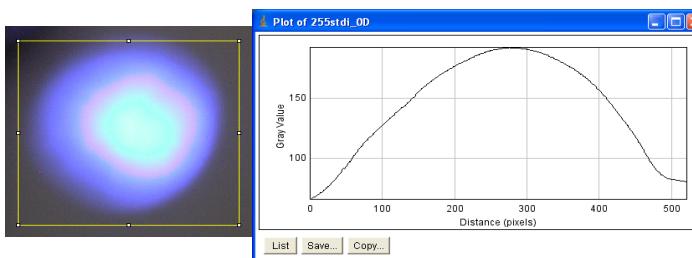

Beam Patterns
